PETER KRULL  
& MELISSA BOOTH

# W

When Peter Krull and Melissa Booth said “I do,” they committed to a lifetime of environmental stewardship. Melissa, a University of Georgia marine microbiologist, carefully monitors the impact of pollution on area waterways. Peter, the CEO of Krull & Company, lets green principles dictate his socially responsible financial services firm. From their eco-friendly home overlooking Doughboy Sound on Sapelo Island, this dynamic duo strives to make the waterfront — and the world — a better place.

“I was a corporate financial advisor when I met my wife, and she patiently introduced me to the importance of environmental sustainability and responsibility.”

**The water has taught me:** That nothing is permanent — everything is in a constant state of flux, like the tides and seasons. How we adapt and react to these changes dictates our course in life. (Peter)

**My waterfront view:** I am fascinated by all things microbial and love to peer (at marine life) through a microscope. (Melissa)

**Staying afloat:** Unsustainable development concerns me. Driving along the coast, I see tremendous opportunity for developers to do the right thing and integrate proven techniques that protect the marshes and waterways. (Peter) Creeks, rivers, wetlands and estuaries can withstand some level of impact, but there is a limit. (Melissa)

**The best part:** Sharing with others our interconnectedness with natural processes occurring all around us each day. (Melissa)
